“4.3.1. Promoting business school - “Student Company”

Students who participate in programs that promote entrepreneurship in education are still a minority (1% of students in secondary schools). Based on the positive experience registered in Norway, where it appears that more than 20% of people interviewed, between 25 and 34 years, that participating to a training program on entrepreneurship, has become an entrepreneur, it is believed that these programs should be strengthened also in the Veneto Region. The main purpose is to contribute significantly to inspire and prepare young people to succeed in the global economy, developing Action plans in Education, relating to Entrepreneurship. This will be achieved by developing processes, putting on site strategic plans, at regional and local level, on entrepreneurship in education and transferring the Norwegian model of “*student company*” to students of upper secondary schools.

The action aims to:

- acquiring skills and basic abilities to students in order to strengthen their attitudes, their critical spirit, their awareness through a curriculum, real and headed, of business management;
- Promoting systematic actions on education to enterprise;
- Developing and concluding bilateral agreements to facilitate the launch of the new business realities.
